

JOB OFFER

WE ARE LOOKING FOR PATHOLOGISTS

Nos valeurs, nos piliers fondamentaux
BIENVEILLANCE | EXCELLENCE
EXEMPLARITÉ | RESPECT | SYNERGIE

chuuclnamur.be

Our core values : Kindness, Excellence, Role model, Respect and Synergy.

Since January 2016, the CHU UCL Namur was born from the merge of the CHU Dinant Godinne & the Maternity Clinic Sainte-Elisabeth of Namur and represents, thanks to its 5,045 workers including 500 doctors, the first private employer in the Province of Namur.

The ambition of our Institution is to build a reference hospital complex at a national and European level offering integrated and university-scale healthcare services at a level of quality that guarantees attractiveness for patients, residents and the best healthcare professionals.

Responsibilities

We are looking for pathologists wishing to invest in a quality work project focused on patient service, in collaboration with the referring clinicians. The Pathological Anatomy department brings together various sectors of activity and is part of the dynamism of the university as institution. Haematological, thoracic, digestive, head and neck oncology are specific expertise areas. Molecular pathology is under development, in close partnership with the clinical biology department.

The team currently consists of 5 permanent doctors and one intern.

Required Skills

- Doctor of Medicine, holder of a Pathological Anatomy specialization, accredited and authorized to practice in Belgium.
- Perfect mastering of the French language.

Useful skills

A strong sense of teamwork, rigor, respect for processes and a real sense of being involved in the department projects are qualities to which we will attach a great importance.

Represents a major asset: an in-depth knowledge of molecular pathology or at least having showed a recent interest in this field and being keen to deep dive in it.

The pulmonary sectors (both oncological and inflammatory and interstitial pathologies), gastroenterology, hematopathology and dermatopathology sectors are the main targets of this recruitment, as is the integration of molecular pathology in all activity fields.

We Offer

- Employee under fixed monthly wages
- Full time
- Involvement into scientific activities (scientific and academic career)
